Building use:  
Office Space for commercial construction company and manufacturing facility  
for Powerlift Hydraulic Doors

SIP benefits for this job:  
Energy Efficiency.

SIP wall thickness: 8" EPS  
SIP roof thickness: na

Benefits of using SIPs on this project. Did SIPs help save time, labor,  
construction costs, or energy?  
There was an existing building that was demolished and the foundation and  
concrete floors were saved. The SIPs were then placed on the same footprint  
as the existing structure. SIPs are incredibly fast to build saving time and labor.

Innovative design elements or structural engineering involved:  
There is a 30'x16' Powerlift Hydraulic Door in the endwall of the building that  
the building is designed to withstand the loads of the door when fully open.

HVAC:  
The 32'x50' office space has radiant heat in the concrete floor and the 50'x128'  
shop has 2 - 120kbtu forced air hanging units
