

Despite rainy conditions which set contractors back a bit, construction progresses quickly at the Sunrise Cottage area. Earlier this week Energy Panel Structures who is manufacturing and supplying structured insulated panels (SIPS) for the project held a dealer builder open house for dealers from across the midwest including Minn, NE, Iowa and Colorado to show the process of construction of buildings with these panels. The panels are one of the most airtight and well insulated building systems available says EPS regional Sales Mgr. Kevin Zadow, Aurelia. Manufacturers say the buildings will use less energy to heat and cool and allow better control over indoor environmental conditions. EPS Dealers got an opportunity to see the process of the construction of the cottages in different phases. "We've never had a project where we've had four structures in various stages so it's real education for everyone," says Zadow. / Photos by Jennifer Nelson
