RE: Scenic Valley Railroad Museum, Boone IA

Eric,

The interior lighting our company installed at the Scenic Valley Railroad Museum consists of energy-star rated 10watt LED recessed can lights and 13watt compact fluorescent lamps which are designed to replace typical 75watt incandescent bulbs.

The exterior wall lighting and sign up-lighting uses 50watt LED fixtures in place of 400watt HID lights.

All of the LED fixtures that were installed have an expected lamp life of 20 years.

Sincerely,

Craig T. Brown, President  
Brown Electric, Inc.
