**Subject:** 10th Street SIPA award

The 10th Street project is a green and healthy affordable housing project. We built this project with the hope of seeing children laughing and playing on the safe playground equipment, while their parents are watching them from the picnic shelter while socializing with the neighbors. The project was constructed using durable, long-term materials, such as cement board siding. We also used water conserving fixtures, such as low-flow toilets and low-flow shower heads and installed Energy Star appliances. To save energy, we added more insulation on walls and ceilings. All the materials used on the inside were installed with low-VOC paints, sealants and adhesives, focusing on tenant health. Jorge
